## **ZF Chooses Lumen: Steel Produced with 100% Renewable Electricity**

Acciaierie Venete has secured a major agreement with ZF, marking a significant milestone in their strategic partnership toward sustainability.

Since April 1, 2025, Acciaierie Venete has been supplying steel manufactured at its Padua plant using **100% renewable electricity**—a solution that, by **fully eliminating Scope 2 emissions**, reduces the product's overall carbon footprint by **up to 30%**.

Beyond its substantial environmental benefits, this agreement reinforces both companies' commitment to **technological innovation**, **production decarbonization**, and an operational model grounded in **responsibility and long-term vision**.

With **Lumen**, Acciaierie Venete actively supports **ZF's sustainability goals**, helping build a more sustainable supply chain and driving positive change across the industrial sector.

The two companies will continue collaborating to identify further **low-impact production solutions**, proving that **performance and sustainability** not only coexist but also mutually reinforce each other.
